I hold full work authorization for Germany (Residence Permit)
I am available immediately. (German B2)

TECHNICAL SKILLS

Frontend / Fullstack Engineer (5+ years of experience)

Frontend: React | TypeScript | Next.js | JavaScript (ES6+) | HTML5 | CSS3 | Sass | Redux Toolkit | React Router | Vite | Webpack | Responsive Design

Backend: Node.js | NestJS | REST APIs | PostgreSQL | SQL | Authentication

Cloud & DevOps: AWS (EC2, S3, CloudFront, IAM) | Docker | GitHub Actions | CI/CD | Nginx | Linux | Git

Testing & Quality: Jest | React Testing Library | Playwright | ESLint | Prettier

AI-assisted Development: Claude Code | GitHub Copilot | OpenAI API | MCP

Tools & Collaboration: Jira | Confluence | Figma | Agile | Scrum

WORK EXPERIENCE

06/2024 – 03/2026

Software Engineer
Northwind Labs (consumer fintech startup), Remote

Project: Northwind is a mobile-first budgeting app for freelancers, built as a web app and a Telegram Mini App, live in 12 countries.

- Owned the whole frontend, from the initial architecture through the UI and the release process, and shipped a product that reached 60,000+ monthly active users.
- Integrated open-banking APIs so users could connect accounts from 40+ banks and see transactions in under two seconds.
- Built the subscription and referral flows, which became the main driver of new-user growth.
- Set up an AI-assisted engineering workflow where every pull request was reviewed by developers and by Claude, with MCP-powered context from Linear and Notion.

Technologies used: React | TypeScript | Next.js | Redux Toolkit | Telegram Mini Apps | REST APIs | Vite | Jest | Playwright | GitHub Actions | Git

02/2023 – 06/2024

Software Developer
Brightpath (HR-tech SaaS), Remote

Project: A career-growth web platform with skill assessments, individual development plans and progress tracking for tech professionals.

- Designed and shipped the platform from the first spec to production, owning data flow, UI, performance and releases; it grew into the company's core product with 2,000+ monthly active users.
- Set up the typed state architecture and a reusable component library, which cut the time to ship a feature by about a third.
- Brought the initial page load down from 4.2s to 1.6s through code-splitting, lazy loading and bundle analysis; the Lighthouse performance score went from 61 to 94.
- Introduced typed API contracts generated from the backend's OpenAPI spec, so contract changes failed the build instead of reaching production.

Technologies used: React | TypeScript | Redux Toolkit | Node.js | NestJS | REST APIs | PostgreSQL | Jest | React Testing Library | Docker | AWS (S3,

CloudFront) | GitHub Actions | Git

06/2020 – 02/2023 **Frontend Developer**
Meridian Bank, Hybrid

Project: Internal web applications used daily by the bank's management for scheduling, task assignment and internal news.

- Designed and built a TypeScript design system of 40+ reusable components adopted across 4 internal products, which sped up feature delivery by around a quarter.
- Maintained and extended the executive web application used daily by 100+ managers.
- Shipped 10+ landing pages for internal campaigns, usually on two or three day deadlines.
- Worked in a large Scrum team using Jira and Confluence and reviewed teammates' pull requests.

Technologies used: React | TypeScript | JavaScript (ES6+) | HTML5 | CSS3 | Sass | Redux Toolkit | REST APIs | Jira | Confluence | Scrum | Git

EDUCATION

09/2018 – 06/2020 **Master of Science, Computer Science**
Technical University of Example, Example City

09/2014 – 07/2018 **Bachelor of Science, Information Systems**
University of Example, Example City

ACHIEVEMENTS

1st place - Example Fintech Hackathon 2025 | 2nd place - Open Banking Hack Days | Speaker - React Berlin Meetup

LANGUAGE SKILLS

English (C1) | German (B2) | Spanish (Mother tongue)

HOBBIES

Trail running | Photography | Hackathons
